

Private Sector Resilience Training

for Emergency Management Offices

DRI International recognizes the need for business continuity and resilience education that connects the public sector with the private sector. We can help you engage the private sector and prepare them for any incident, through industry-recognized training and certification programs.

The companies in your community have invested time and resources in building their businesses and they rely heavily upon public sector entities to provide services that allow them to deliver goods and services to their customers. Any business disruption could be costly, resulting in significant revenue and customer losses, perhaps even jeopardizing the business itself. It is an obligation of federal, state, and municipal authorities to build resiliency and business continuity programs that will ensure public safety and also protect private sector entities. And it's your job to reach out to them, to show that the OEM understands their recovery needs and requirements, and let them know what to expect from the OEM during that crucial period during and after an event.

DRI training is the tool in your toolbox that will give you access to these companies – and get them to come to you. As a global education and certification body in business continuity, DRI has more than 15,000 active

certified professionals worldwide. DRI certifies individuals from 100+ countries and conducts training in 50+ nations, in multiple languages. An ANSI-accredited SDO, DRI advises governments and organizations in creating standards and works with the private sector to promote readiness.

By hosting one of our courses, you have the opportunity to train key representatives of your community in business continuity, risk management, and other resilience disciplines, and puts everyone on the path to certification. Training events are also effective networking events, offering opportunities to:

- Help businesses in your region understand what to expect from your office, to incorporate those details into their plans.
- Network and build relationships with other industries in your community, such as local government, emergency services, healthcare, tourism, and more.
- Discuss real events and situations that have impacted your area and gain additional perspectives on effective response.
- Focus on both the business community's short-term needs with your overall needs for your community's recovery, and integrate them into your long-term goals to improve the overall risk health of the community.

DRI training ensures both the public sector and private sector partners are ahead of the curve when they absolutely need to be. To host the training experience that best suits the needs of your office and your community partners, call us at **(866) 542-3744** today!

Our Courses

DRI International provides training programs that provide in-depth instruction and ample time for networking. Here are just a few of our courses:

Business Continuity (BCLE 2000)

This 4.5-day introductory course offers an overview of the business continuity planning process and industry terminology, using the Professional Practices, and prepares you to take the qualifying exam that sets you on the path to certification.

Business Continuity Review (BCP 501)

A rapid refresher that preps you for the qualifying exam, the 2-day course emphasizes BC planning, skills, and procedures needed to effectively implement a BC plan.

Continuity Metrics (BCP Met)

This 1-day session is targeted to those looking to implement or update their metrics program, helping professionals better communicate the functionality and capability of their BCM program.

Risk Management (RMLE 2000)

Whether you're a seasoned risk manager or new to the field, this 4.5-day course offers detailed tools for implementing risk evaluation and control measures, and can lead to specialty certification.

Public Sector Continuity (GCLE 2000)

Carefully developed to meet the needs of the public sector, this 4.5-day course provides business continuity training that incorporates the terminology and regulations specific to public sector work.

These are just a few of our offerings. For more training courses, visit call **(866) 542-3744** or visit **www.drii.org**!

OEMs Say...

"Local businesses should understand what to expect in the case of an emergency, and that comes through education and relationship building and training. The organizations that have engaged and dedicated their own time and resources can take better advantage of their opportunities and options and stay ahead of the game."

— **Ira Tannenbaum, Director of Public/Private Initiatives,
New York City Office of Emergency Management**

"Our training events bring in practitioners from a variety of local industries, who are eager to touch base with each other on a regular basis. People like the networking opportunities training event provide them."

— **Kevin Cleary, Community Program Manager,
Baltimore City Office of Emergency Management**

"It's important to have the major local businesses thinking about continuity in the short and long term, if they participate in stabilization efforts in the community and help us provide critical services. In the long term, I need those businesses functioning if I'm going to have any sort of community left after a disaster!"

— **Training Specialist for Midwestern OEM**
