CAN DO Innovation Summit Receives 1400 Virtual Visitors

Michael Behr

05 February 2021, 11.18am

The virtual event discussed how SMEs can develop better business models in the face of the economic fallout of the coronavirus.

Scotland's CAN DO Innovation Summit received 1400 registered delegates, including entrepreneurs, academics, investors and innovators from across the globe when it was held virtually for the first time on 3 February.

In response to the global pandemic, the summit was designed specifically for small to medium sized enterprises (SMEs) looking to explore opportunities, develop new and better business models, drive a sustainable competitive advantage and spark valuable connections – with the hope of leading to exciting collaborative innovation opportunities.

The content from the event is now available to view online through the CAN DO Innovation Summit [website](#).

A **FREE** tool for organisations of all sizes, which helps find out **how resilient they are to cyber attacks** and practise their response in a safe environment.

Director of Glasgow City of Science and Innovation Dr Susie Mitchell said: “It’s been really exciting for us to see how bringing the event online has delivered on making it a far more accessible event for audiences across Scotland and beyond, particularly for our international delegates who joined us from as far as America, Africa and Asia.”

The summit provided SMEs with the tools they require to adapt to current and future economic and social challenges by offering insight from world-leading experts and local talent in the field of innovation.

Fifty industry panellists, keynote speakers and international contributors formed a full day line-up of [discussions and talks](#) around the themes of: Journey to a Sustainable Future; Recovery & Resilience; Workplace Culture; Advance manufacturing & Digitisation; MedTech/Health Innovation.

Dr Mitchell said: “In the context of the new reality in which we find ourselves, we heard from Lolita Jackson about the critical need to build a truly sustainable society with embedded an inequitable innovation at its heart.

“Our keynotes Chloe Demrovsky and Dyan Finkhousen advised that now more than ever businesses must be more agile, more open to adopting emerging technology and as resilient as they possibly can be by preparing and planning for the unexpected.

“Our concluding keynote Craig Foster inspired us with the inner workings and core components of Pixar’s peer culture to exemplify the importance of open, creative and collaborative working cultures.”

She concluded: “We must not be constrained by traditional thinking, we need to constantly challenge assumptions.

“Whether you are a micro-business, SME or large corporate, ramping up digital firepower will now be critical across all sectors, but technology alone is not enough. Creative and empathic leadership, the right culture and mindset, as well as empowered employees, will aid recovery and help businesses to innovate the solutions to build a better tomorrow for people and the planet.”
